# Canonical Derivations in Programmed Grammars

Petr Zemek

### Supervisor: Prof. RNDr. Alexander Meduna, CSc.

Brno University of Technology Faculty of Information Technology

12.6.2008

프 🕨 🛛 프

- Study programmed grammars and canonical derivations in these grammars.
- Show that the left restriction range affects the generative power of programmed grammars.
- Clarify results significance for syntactical analysis.
- Sum up obtained results and discuss further research possibilities.

Infinite Hierarchy Results Significance

Infinite Hierarchy Results Significance

# **Results Significance**

### Theoretical

Extends knowledge in the area of regulated rewriting

### Practical

Syntactical analysis based on programmed grammars

< ∃⇒

ъ

## **Further Research**

- Solve open questions related to this work
  - Relation between *n*-limited state and *n*-limited programmed grammars
  - Programmed grammars with erasing rules

ъ

#### End of presentation, thank you for your attention!
